## EDUCATION

---

### University of California, Berkeley

Expected May 2027

*Bachelor of Science in Mechanical Engineering*

*GPA: 3.95/4.0*

- **Relevant Coursework:** Solid Mechanics, Dynamics, Thermodynamics, Control Theory, MATLAB, Python, 3D Modeling, Design & Manufacturing, Electronics and IoT, Fluid Mechanics, Product Development
- **Teaching Assistant:** ME136 – Dynamics and Control of Autonomous Flight

## EXPERIENCE

---

### Mechanical Engineering Intern

Mar. 2026 – Present

*Acrokin*

*Berkeley, CA*

- Designed, manufactured, and assembled complex mechanical assemblies for 1920s Chevrolet restoration projects in SolidWorks, including a motor meter and historically accurate oil filtration system.
- Performed tolerance stack-up analysis, selected manufacturing processes and materials, collaborated with vendors to verify manufacturability, and produced manufacturing-ready engineering drawings with GD&T.
- Designed multi-component PCBs in KiCad, integrated electronics into mechanical assemblies, and assembled boards using SMD soldering and a reflow oven.
- Operated CNC mills, lathes, shadowgraphs, micrometers, and precision gauges; developed intern training documentation and improved inventory organization and machine shop workflows.

### Mechanical Engineering Intern

Jul. 2023 – Jul. 2025

*Omniscent*

*San Jose, CA*

- Improved the packaging layout of a VOC analyzer enclosure using SolidWorks and 3D-printed prototypes, reducing overall size by 9% while preserving thermal clearance.
- Standardized component placement and port geometry to improve assembly speed and maintain airtight gas-path seals during concentration measurements.
- Managed a 175-part BOM and implemented inventory tracking, reducing procurement lead time by one week.
- Assembled precision detection hardware and created training videos for field calibration.

### Undergraduate Researcher

Aug. 2025 – Dec. 2025

*TAFLAB*

*Berkeley, CA*

- Designed and fabricated vertical-axis wind turbines for autonomous sailboats, increasing swept area by 28
- Designed a modular gearbox and benchtop test rig using PETG and PLA prototypes.
- Led two drone-mount redesigns that reduced weight and drag by internalizing electronics, validated through field testing.

## PROJECTS

---

### E-Bike Conversion | *Mechanical Design, Electrical Integration*

Dec. 2025

- Converted a standard bicycle into a safe electric vehicle by modifying mechanical components and integrating power electronics. Designed custom mounting hardware and wiring layouts to ensure structural safety, vibration resistance, and compliance with road-use constraints.

### Classic Car Restoration | *Automotive Engineering, Sourcing*

Jun. 2021 – Present

- Restored a 1989 Jaguar XJS and 1980 GMC Sierra to daily-driver status by refurbishing engine systems and bodywork. Diagnosed mechanical and electrical faults using service manuals and hands-on testing, rebuilding subsystems to restore reliability and drivability.

## TECHNICAL SKILLS

---

**CAD/Modeling:** SolidWorks (CSWA Certified), Fusion 360, Onshape, Photoshop

**Programming:** C++, Python, MATLAB

**Fabrication:** CNC Mill, Lathe, Water Jet, Laser Cutter, TIG, 3D Printing

**Languages:** English (Native), Farsi (Fluent), Spanish (Conversational)
