EDUCATION

University of California, Berkeley

Expected May 2027

Bachelor of Science in Mechanical Engineering

GPA: 3.95/4.0

- **Relevant Coursework:** Solid Mechanics, Dynamics, Thermodynamics, Control Theory, MATLAB, Intro to Python, 3D Modeling, Design & Manufacturing, Electronics and IoT
- **Teaching Assistant:** ME136 – Dynamics and Control of Autonomous Flight

EXPERIENCE

Mechanical Engineering Intern

Mar. 2026 – Present

Acrokin

Berkeley, CA

- Reverse engineered components for a 1920s Chevrolet using high-precision 3D scanning, micrometers, bore gauges, pin gauges, and shadowgraphs, capturing critical dimensions and tolerances to within 0.001 in.
- Designed components for clients in SolidWorks, researching thread specifications, material properties, sheet-metal gauges, fits, and O-ring compression to ensure precise fit and functionality.
- Developed complex mechanical assemblies with threaded connections, tolerance stack-ups, custom hardware, and historically accurate design constraints; produced manufacturing-ready engineering drawings using GD&T.
- Operated CNC mills, lathes, and precision inspection equipment while supporting casting, prototype fabrication, testing, CAD file management, inventory organization, and machine-shop maintenance.

Mechanical Engineering Intern

Jul. 2023 – Jul. 2025

Omniscent

San Jose, CA

- Improved the packaging layout of a VOC analyzer enclosure using SolidWorks and 3D-printed prototypes, reducing overall size by 9% while preserving thermal clearance.
- Standardized component placement and port geometry to improve assembly speed and maintain airtight gas-path seals during concentration measurements.
- Managed a BOM for 175 unique components and implemented an inventory tracking system that reduced procurement lead times by one week.
- Supported assembly of high-precision detection hardware with complex ICs and electromechanical components; created a video-based training manual for field calibration procedures.

Undergraduate Researcher

Aug. 2025 – Dec. 2025

TAFLAB

Berkeley, CA

- Designed and fabricated vertical-axis wind turbines for autonomous sailboats, increasing swept area by 28% to improve power capture in 4–5 m/s wind conditions.
- Designed and built a modular gearbox and benchtop test rig using PETG and PLA prototypes.
- Led two major drone-mount redesigns that reduced structural bulk and aerodynamic drag by internalizing electronics, then validated durability through weekly field trials.

PROJECTS

E-Bike Conversion | *Mechanical Design, Electrical Integration*

Dec. 2025

- Converted a standard bicycle into a safe electric vehicle by modifying mechanical components and integrating power electronics. Designed custom mounting hardware and wiring layouts to ensure structural safety, vibration resistance, and compliance with road-use constraints.

Classic Car Restoration | *Automotive Engineering, Sourcing*

Jun. 2021 – Present

- Restored a 1989 Jaguar XJS and 1980 GMC Sierra to daily-driver status by refurbishing engine systems and bodywork. Diagnosed mechanical and electrical faults using service manuals and hands-on testing, rebuilding subsystems to restore reliability and drivability.

TECHNICAL SKILLS

CAD/Modeling: SolidWorks (CSWA Certified), Fusion 360, Onshape, Photoshop

Programming: C++, Python, MATLAB

Fabrication: CNC Mill, Lathe, Water Jet, Laser Cutter, 3D Printing

Inspection: Micrometers, Bore Gauges, Pin Gauges, Shadowgraphs, 3D Scanning

Languages: English (Native), Farsi (Fluent), Spanish (Conversational)
